Caution:  
Be sure to review Watchit! 3D Spec Sheet at [www.byVinzant.com/details](http://www.byVinzant.com/details) before using Watchit! 3D while operating a vehicle.

### Why Watchit! 3D?

Using a smart watch while operating a vehicle creates an unsafe situation.

It's desirable to have a smart watch mounting & charging solution in a vehicle.

You're driving down the road and your smart watch needs charged, what do you do?

If you own Watchit! 3D your problem is solved. It's like having a 3rd wrist.

Sometimes your smart watch needs charged, sometimes you just get tired of wearing it.

Smart watches offer an optimized user interface which is great for driving. However, just like operating smart phones, it is unsafe to operate smart watches while driving without having them on a mount which keeps both hands free to drive.

Watchit! 3D is a first to market product in patent pending status. Its integral spring-loaded mechanism quickly and easily clamps the watch bands to the mount allowing the smart watch to be operated as if it's on one's wrist.
